

TREATMENT UNIT SUSTAINABILITY ASSESSMENT FORM (TUSAF) SUSTAINABILITY ASSESSMENT KEY

Item		Description	Go to:
	1	Residual overstory canopy greater than 50% (Partial cut)	Go to 13
	(TUSAF #4)	Residual overstory canopy less than or equal to 50% (Regeneration Cut)	Go to 2
	2	Advance regeneration less than 70%	Go to 6
	(TUSAF #9)	Advance regeneration greater than or equal to 70%	Go to 3
Regeneration Harvest – Advanced regeneration present, abundant	3	Interfering plants overtopping desirable regeneration greater than or equal to 70%	Go to 4
	(TUSAF #11)	Interfering plants overtopping desirable regeneration on less than 70%	Go to 5
	4	Interference treatment planned in conjunction with harvest	Go to 5
	(TUSAF #12)	Interference treatment not planned	Delay harvest. Seek assistance.
	5	Deer impact low or deer impact reduction planned (fencing or very aggressive hunting)	Treat and harvest. Follow up stand development. Probably sustainable.
	(TUSAF #13, 14)	Deer impact high and no deer impact treatment planned.	Seek assistance. Will seedlings overwhelm deer?
Regeneration Harvest – Advanced regeneration inadequate	6	One or more desirable seed source species lost or reduced in overstory to less than 15 large/30 small sawlog trees per acre with strong crowns	Delay harvest. Seek assistance.
	(TUSAF # 8)	Desirable seed source species greater than or equal to 15 large/30 small sawlog trees with strong crowns retained	Go to 7
	7	Fern ≥ 30% on 30% of plots or more	Go to 10
	(TUSAF # 10)	Fern < 30% on at least 70% of plots	Go to 8
	8	Grass/sedge ≥ 30% on 30% of plots or more	Go to 10
	(TUSAF # 10)	Grass/sedge < 30% on at least 70% of plots	Go to 9
	9	Woody interference ≥ 30% on 30% of plots or more	Go to 10
	(TUSAF # 10)	Woody interference < 30% on at least 70% of plots	Go to 10
	10	Any interference ≥ 30% on 30% of plots or more	Go to 11
	(TUSAF # 11)	Any interference < 30% on at least 70% of plots	Go to 12
	11	Interference treatment that conserves seedlings planned in conjunction with harvest.	Go to 12
	(TUSAF # 12)	Interference treatment not planned	Delay harvest. Desirable seedlings not likely competitive after harvest. Seek assistance

	12	Deer impact low or deer impact reduction planned (fencing or aggressive hunting)	Consider waiting for more seedlings to develop after deer treatment.
	(TUSAF # 13, 14)	Deer impact high and no deer impact treatment planned.	Delay harvest. Scarce seedlings likely to disappear after harvest. Seek assistance.
Partial Cut – Check seed source	13	One or more desirable seed source species lost or reduced in overstory to less than 15 large/30 small sawlog trees per acre	Delay harvest. Seek assistance.
	(TUSAF # 8)	Desirable seed source species (greater than or equal to 15 large/30 small sawlog trees per acre with strong crowns) retained	Go to 14
Partial Cut – Check residual stand	14	Average DBH retained or increased (less than or equal to 10% reduction)	Rate of growth likely sustained or improved. Go to 15.
	(TUSAF # 6)	Average DBH reduced	Rate of growth likely slowed. Go to 15.
	15	Timber quality sustained or improved by harvest, average DBH retained or increased (less than or equal to 10% reduction)	Future valuable harvest probable. Probably sustainable.
	(TUSAF # 7, 6, 8)	Timber quality sustained or improved by harvest, average DBH reduced by more than 10%.	Future valuable harvest probable, though later than with diameter improvement. Probably sustainable.
		Timber quality reduced by best trees removed and/or damage to residual, greater than or equal to 15 large/30 small strong-crowned trees of desirable species per acre retained as seed source.	Future valuable harvest at risk. Consider regenerating.
END			
KEY			
Probably sustainable		CAUTION – Reconsider	STOP! Seek assistance!
